

Global Wine Ratings Analysis

Price, Rating & Geographic Insights | 13,833 Wines | 4 Types | 33 Countries

1. Overall Dataset Summary by Wine Type

Metric	Red	White	Rosé	Sparkling	All Types
Count	~4,600	~4,200	~2,600	~2,400	13,833
Avg. Rating	3.88	3.87	3.84	3.89	3.87
Median Price	\$22	\$19	\$15	\$28	\$20
Price Range	\$4-\$500+	\$4-\$300+	\$4-\$200+	\$8-\$500+	\$4-\$500+

90%+ of wines score between 3.5 and 4.5. Sparkling commands the highest median price; Rosé is the most affordable. Rating variance is low across all four types.

2. Price Distribution Across Rating Levels & By Wine Type

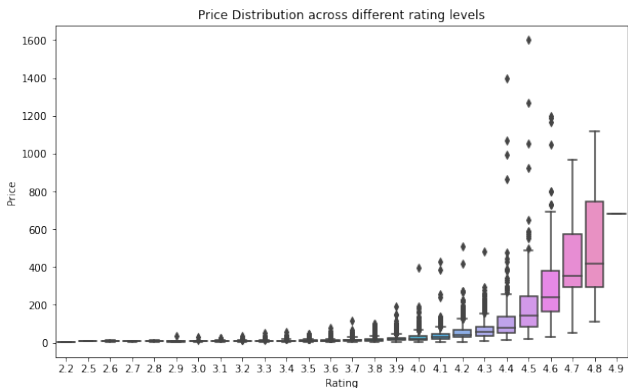

Figure 1: Price Distribution by Rating Level

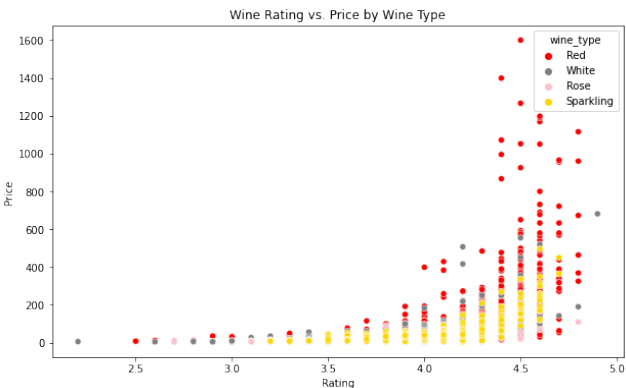

Figure 2: Rating vs. Price by Wine Type

Price rises non-linearly with rating — wines rated 4.5+ show the widest price variance with luxury outliers above \$500. No wine type monopolises the premium segment.

3. Wine Type Comparison: Price & Rating Distributions

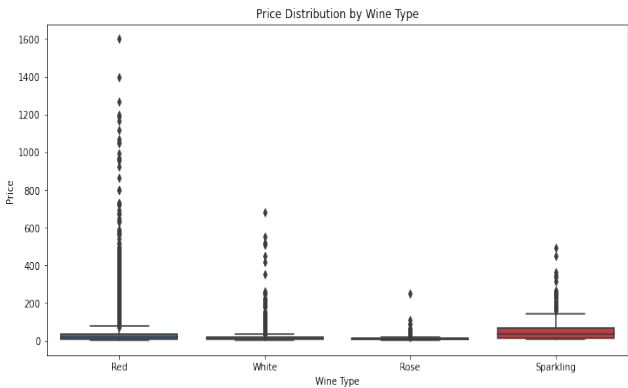

Figure 3: Price Distribution by Wine Type

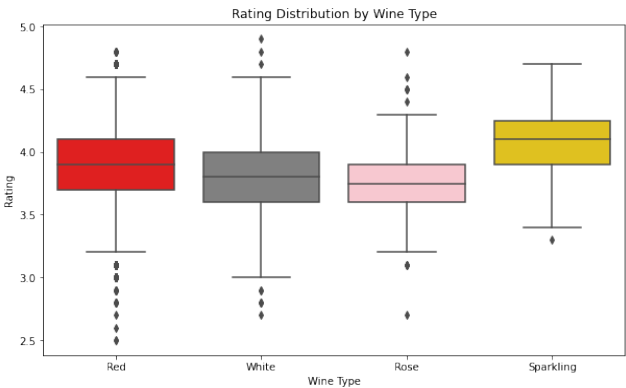

Figure 4: Rating Distribution by Wine Type

Wine type drives price positioning more than quality. Sparkling and Red command the highest prices, yet all four types share near-identical rating distributions (median 3.8–3.9).

4. Correlation Analysis

Variable Pair	Direction	Interpretation
Rating ↔ Price	Weak positive	Higher-rated wines loosely command higher prices
Price ↔ Vintage Year	Weak negative	Older vintages tend to be priced higher (scarcity effect)
Rating ↔ # Ratings	Near zero	Popularity does not predict quality score
Price ↔ # Ratings	Weak negative	Premium wines attract fewer but more selective reviews

No single feature is a strong linear predictor of another. Pricing reflects brand prestige and terroir as much as measurable quality.

5. Geographic Analysis: Average Rating & Price by Country

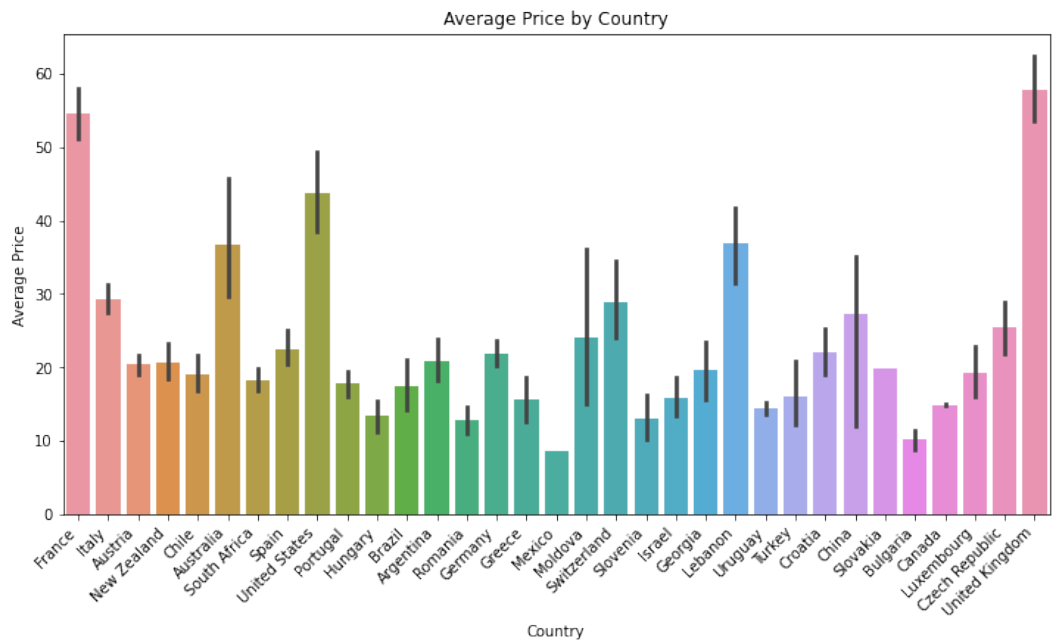

Figure 5: Average Rating and Price by Country

France dominates average price per bottle, driven by Bordeaux and Burgundy. Italy leads in volume. Rating differences across countries are narrow (3.7–4.1), confirming that geography influences price far more than perceived quality.

6. Key Findings

Finding	Detail
Price–rating weakly correlated	Brand, scarcity and terroir explain price as much as quality score
Wine type drives price, not rating	Sparkling & Red are priciest; all types share similar rating bands
France leads on price, Italy on volume	Rating gap between countries is narrow (~0.3 pts range)
Older vintages command a premium	Pre-2005 wines price significantly higher due to scarcity
Popularity ≠ Quality	Widely-rated wines skew affordable; premiums attract fewer reviews
